

DECLARATION OF COMPLIANCE PER AND POLY FLUOROALKYL SUBSTANCES (PFAS)

To whom it may concern;

Per and Poly Fluoroalkyl Substances (PFAS) are synthetic organofluorine chemical compounds that have multiple fluorine atoms attached to an alkyl chain used in a wide range of consumer and industrial products. PFAS include PFOA, PFOS, PTFE, FKM, and PVDF. PFAS have various applications in electronic products such as protective/water-resistant coatings and do not easily degrade. They are not biodegradable and accumulative in nature, and are thus referred to as forever chemicals. As such, PFAS are highly regulated due to their toxicity and persistence in the environment and have been banned in countries such as the USA, EU and Canada per compliance regulations such as the U.S. Toxic Substances Control Act (TSCA) Section 8(a)(7).

Challenge Electronics maintains the greatest possible effort to upkeep the strictest standards to ensure the safety of all those encountering Challenge Electronics products, both customers and manufacturers. As such, Challenge Electronics does it's best to maintain compliance to all chemicals listed as Per and Poly Fluoroalkyl Substances (PFAS). To the best of our knowledge and based on verified information through supply chain surveys, Challenge Electronics full product line is in compliance with the PFAS Regulations and do not contain substances subject to restriction.

For additional questions or concerns, please contact your Challenge Electronics sales representative.

Best regards,

Joshua Klyman
